Report

- Use a structure that is similar or contains the same parts as indicated in part 6 of the assignment guidelines (Introduction, Methodology, Results, Discussion, Limitations, Conclusions)
- Visualise your results
- No word limit but reports can be concise and score very high marks, as long as the important parts are clear (hypotheses, methods, results, reflection). It is neither necessary nor beneficial to write a lot of prose in this report.

How to avoid zero marks

- Write code that compiles.
- Make sure to adhere 100% to the hand-in requirements described in part 7 of the assignment guidelines, in particular:
  - Submission file contains ALL required files, including code files, experiment files, script & report.
  - Correct naming, structure, and location of ALL files and folders
- Batch file or shell script included that reproduces your result files automatically
- Everything is your genuinely own work – avoid plagiarism and collusion
